

RADIESSE®

Immediate Volume + Collagen Stimulation

Radiesse provides **structural lift** and **collagen stimulation**. It can be used in:

- **Standard concentration** – for lifting, contouring, and restoring volume
- **Hyper-dilute form** – for improving skin quality, thickness, and elasticity without noticeable volume

What Makes Radiesse Unique

- Provides **instant lift and contour** (standard Radiesse)
- Stimulates collagen production over time for natural improvement
- **Calcium-based formulation** – unlike hyaluronic acid dermal fillers
- Hyper-dilute Radiesse improves **skin texture, firmness, and elasticity** gradually
- Because it is semi-permanent, it is **more difficult to dissolve than HA fillers**, so results are considered long-lasting and predictable
- Typical duration:
 - **Standard Radiesse:** 12–18 months (gradually metabolized)
 - **Hyper-dilute Radiesse:** 6–12 months, depending on area and individual response

Immediately After Treatment

You may notice:

- Swelling (2–5 days)
- Mild bruising
- Tenderness
- Temporary firmness

Standard Radiesse: Instant lift and contour visible.

Hyper-Dilute Radiesse: Subtle improvement in skin quality; minimal volume change.

Collagen & Results Timeline

Time	Standard Radiesse	Hyper-Dilute Radiesse
Immediate	Instant lift and contour	Minimal change; focus on skin support
Weeks 1–4	Collagen stimulation begins	Collagen formation begins; skin texture starts improving
1–3 Months	Peak visible results – structural lift + collagen effect	Noticeable improvement in skin firmness and elasticity
6–12 Months	Ongoing collagen remodeling; gel portion gradually absorbed	Continued skin improvement
12–18 Months	Radiesse fully metabolized; collagen remains	Results gradually taper; maintenance may be desired

Aftercare Guidelines

First 24 hours:

- Avoid strenuous exercise
- Avoid alcohol
- Avoid excessive heat (sauna, hot tubs, steam rooms)
- Do **not massage** unless instructed (hyper-dilute may require gentle massage)

When to Contact the Office

- Increasing pain
- Significant swelling
- Skin discoloration
- Signs of infection

Radiesse, whether **standard or hyper-dilute**, is a **semi-permanent, calcium-based injectable** that provides **immediate and long-term benefits**. It enhances structure, stimulates natural collagen, and improves skin quality — giving **lasting, natural results** in a safe and predictable way.
